

The Atrium, Pacific Place Hong Kong

Located in the hub of Hong Kong, The Atrium is one of the Pacific Place apartments, housing 136 prestigious suites. This tower offers luxury serviced homes at Hong Kong's premium business, shopping and transport district - Admiralty. It boasts breathtaking views across world-famous Victoria Harbour, soul-calming Hong Kong Park and the Peak, as well as dynamic city skylines.

Decorated with a "Contemporary-Oriental" luxury home essence and completed with a clean-line outlook, the Atrium is an exquisite world of minimalist subtleties inspired by timeless Zen style. Being a five-star serviced apartment, The Atrium provides wonderful experience and excellent service for customers with high quality amenities. It features an integrated Crestron control solution, providing streamline control over the background music and public address systems for the whole building. The control systems are installed in the lobby, private dining room, gym room, bar, sky lounge and public areas.

Crestron system has been installed for centrally controlling the paging system, and audio/video distribution system throughout the apartment. 3 Crestron CP2E processors are used to control the whole AV system. TPS-12 tilt touchpanels and TPS-4L wall mount touchpanels installed in bar and gym room, provide user-friendly interface for video and audio signals switching, zone selecting, volume control and equipment

control. Through the Crestron touchpanels, users can easily control individual equipment functions like Volume up/ down, Play, Pause, Stop, Fast forward and Record of various devices.

The 49th floor private dining room is generally treated as its own separate system. Twelve-button C2N-B12 Cameo keypads control local volume up/down; background music on/off and room on/off. "Room on" triggers preprogrammed functions such as setting the audio to a default level, turning on the displays and routing specified sources to them.

Another three Cameo keypads in the BMS control room are configured for controlling master volume, selecting various zones, and selecting different sources input to specific area as background music.

The Atrium is well equipped with many advanced AV gears for the entire background music and public address systems of the whole tower. Crestron integrated control system helps to simplify all the sophisticated manipulation procedures over those systems. Productivity and efficiency can be raised with Crestron control.
