Crestron Introduces the Versatile TPMC-9 Touch Panel, Delivering Speed, Power and Performance at a Great Value

TPMC-9 Touch Panel Supports Standards-Based Core 3 OS; Sleek, Contoured Design, Widescreen Display and Extreme Graphics

Crestron announced today that its new TPMC-9 Tilt Touch Panel is now shipping. TPMC-9 is the perfect-sized touch screen, large enough to enjoy a full, rich interactive user experience with a stylish design that remains discreet in any setting. A 9" widescreen provides more space for designing custom graphical interfaces, and a larger display for viewing cover art, control apps and scores of other dynamic content. TPMC-9 also offers a slew of cool new media and communications tools like widgets and high-definition streaming video for IP/Web security cameras that instantly enhance whole home and building automation systems.

"The new TPMC-9 offers incredible value for a touch panel of this size," said Vincent Bruno, Crestron Director of Marketing. "With its slim profile and luxurious design, along with a widescreen display, this Core 3 OS ready touch screen is perfect for the most demanding system designers and interior designers."

TPMC-9 enables extreme graphics and animations, including cover flow and page flips. Gestures navigation with intelligent velocity makes finger swipe control of theater systems, lighting, AV networks, thermostats, security cameras, and any other connected home or building system fast, fun and easy. TPMC-9 is engineered to support the new Crestron Core 3 OS, the foundation for its new GUI framework. The open standards-based Core 3 OS will run Flash®, HTML5 and the latest H.264 high definition video formats.

Featuring sleek lines and graceful contours, TPMC-9 adds a clean and stylish appearance on countertops, desks, podiums, and bedside tables. The tilt screen can be freely adjusted or locked down at up to a 45 degree angle for optimal viewing and operation, and compliments any interior design in residential and commercial settings.
