Crestron Mobile Pro™ iPhone® App Now Available

Crestron Delivers the Most Versatile iPhone Apps Available

Crestron Mobile™ and Crestron Mobile Pro™ Turn Your iPhone® into a Virtual Crestron Touchpanel

Crestron, the leader in integrated home control of lights, shades, thermostats, entertainment and security, introduces two iPhone® Apps to suit any need, at home or away. While lying on the beach or sitting in traffic, connect with Crestron Mobile™ to view home or office alarm status and adjust lights and room temperatures. Crestron Mobile Pro™ provides even greater power and flexibility to control your whole house, including pre-set audio and lighting scenes, home entertainment, pool/spa and more. Both are compatible with the original iPhone, iPhone 3G and iPod touch®.

Crestron Mobile Pro provides the most powerful and complete app for whole house control. Simply tap the screen to select movies, music and TV in any room or adjust volume, light levels and room temperature with just a touch. Using the home Wi-Fi network locally or the powerful 3G and EDGE networks remotely, total control is always at your fingertips.

"Our iPhone apps harness the power of 3G and EDGE networks to put a Crestron touchpanel in the palm of your hand," said Vincent Bruno, Crestron Director of Marketing. "From virtually anywhere, you can monitor and control systems in your home or office as if you were there."

Crestron Mobile and Mobile Pro provide direct communication to the control system without any third-party software or external servers. The graphical interface works just like a Crestron touchpanel and delivers the same seamless control of all integrated systems, while a large library of built-in graphics provides a great tool for custom designs plus reduces download times. Any updates or changes to the control program are automatically sent to the iPhone/iPod touch when the Crestron app is launched.

Start with the free Crestron Mobile app or take complete control with Mobile Pro.
