New Prodigy® Keypads Offer Affordable, Streamlined Wireless Control Of Whole Home Lighting And Audio

New Prodigy® Wireless Keypads Connect Directly to Prodigy Home Control Systems for Extreme Reliability of Extended Wireless Networks; Separate Wireless Gateway Not Required

NEW PRODIGY® KEYPADS OFFER AFFORDABLE, STREAMLINED WIRELESS CONTROL OF WHOLE HOME LIGHTING AND AUDIO

Crestron today announced the release of two new Prodigy® Wireless Keypads, which enable streamlined wireless control of lighting and multiroom audio distribution systems in the home. The P-CBDEX Prodigy Wireless Keypad and P-KPLEX Prodigy Wireless Lighting Keypad connect directly to a Prodigy home control system. All Prodigy control systems, including the new PMC3 and PMC3-XP, feature a built-in wireless gateway so there's no need to setup a separate wireless network. Providing simple, push-button control of lighting dimming levels and a variety of audio system commands, the innovative new design also extends the range of Prodigy handheld remotes and simplifies system installation.

"Our new Prodigy wireless keypads make installation easier since you don't need a separate wireless gateway," said Vincent Bruno, Crestron Director of Marketing. "With the new infiNET™ EX mesh network supporting up to 100 wireless devices, which enables larger, more reliable wireless system designs."

The P-CBDEX Prodigy Wireless Keypad provides the versatility of controlling lighting dimming or a multiroom audio system with one efficient model. P-CBDEX includes all buttons required for complete room lighting control and audio control, indicating preset lighting levels, on/off, audio source selection, volume and more. Simply snap on the lighting control or the audio control button layouts and the versatile keypad is ready to provide convenient, reliable control throughout the home. Layouts of up to 8-buttons are possible, enabling homeowners to choose their ideal button configurations. Six green pinhole LED lights provide convenient 2-way feedback from the control processor and inform occupants of real-time system status.

The P-KPLEX Prodigy® Wireless Lighting Keypad enables easy rocker-type control of room lighting and dimming in a stylish, easy-to-install design. P-KPLEX provides simple, multi-way control of Prodigy wireless switches, dimmers and lamp dimmers as part of a Prodigy whole home lighting control system. As a wireless device, P-KPLEX keypads are much easier to wire than traditional 3-way circuits, as no "traveler" wire is necessary, saving time and expense during installation.

The award-winning, affordable Prodigy® line of home technology opens the door to convenient and powerful home automation solutions to all homeowners. For more information on the P-CBDEX and P-KPLEX Prodigy Wireless Lighting Keypad, please visit: <http://www.crestron.com/prodigy>
