Crestron Mobile Pro® G iPad™ App Updated to Support Landscape Rotation and Gestures Navigation

Auto-Update for Top Grossing Lifestyle iPad™ App Now Available from the iTunes® App Store

The newest version of the Crestron iPad™ app is now available from the iTunes® App Store, where it was recently ranked the #1 Top Grossing iPad Lifestyle App. This update includes automatic portrait/landscape rotation and gestures navigation on the iPad for both Crestron and Prodigy® control systems. A beautiful graphic template with user-selectable backgrounds designed especially for the iPad is available from the Crestron website.

There are also infinite possibilities for customization. Dealers can create their own branded designs and clients can enjoy the same look and feel on their iPad as on their Crestron touchpanels.

A control interface is only as powerful as the control system behind it; Crestron is the most powerful, flexible and reliable control system in the world. "We value our close partnership with Apple®. Connecting the most popular mobile device to the most powerful control system is a truly magical combination," said Vincent Bruno, Crestron Director of Marketing. "Adding landscape rotation and gestures navigation to our app takes full advantage of the iPad's most popular features."

Using Wi-Fi locally or 3G network remotely you can access and control Crestron and Prodigy homes from anywhere on the planet. The ultimate mobile touchpanel puts control at your fingertips, all in real time and from anywhere.
